CONTENTS

HIGHLIGHTS – YEAR ENDED DECEMBER 2020

- Sixty-six international scheduled airlines operated services to/from Australia during the year (includes six dedicated freight airlines but excludes airlines operating only via code share arrangements). Several airlines have suspended all scheduled services or are only operating freight-only services to and from Australia during the period impacted by COVID-19.

- International scheduled passenger traffic in 2020 was 9.302 million compared to 42.508 million in 2019 – a decrease of 78.1 per cent. International air services have been severely impacted by travel restrictions introduced at the end of March 2020 due to the COVID-19 pandemic.

- Chart I shows total passenger traffic for the years 2010 to 2020. Over this period, each year except 2020 recorded an increase in traffic compared to the previous year.

- Chart II compares monthly passenger traffic for 2020 with monthly passenger traffic for 2019. Each month since April 2020 has recorded a decrease of around 98 per cent compared to the same month in 2019. January, February and March together accounted for 93 per cent of the total passenger traffic recorded in 2020.

- Chart III shows the airline market shares in terms of passenger carriage for the top ten airlines for 2010, 2015 and 2020. In the latest year, Qantas Airways had the largest share of the market with 16.5 per cent followed by Jetstar with 8.5 per cent, Singapore Airlines with 8.0 per cent, Air New Zealand with 7.6 per cent and Emirates with 7.1 per cent.

- Compared to 2010, Qantas Airways' share has decreased by 2.6 percentage points, Jetstar's share has increased by 0.4 percentage points, Singapore Airlines' share has decreased by 1.2 percentage points, Air New Zealand's share has decreased by 0.5 percentage points and Emirates' share has decreased by 1.0 percentage point.

- The decrease in share of passenger traffic for the Qantas group (Qantas Airways, Jetstar and Jetstar Asia) was 2.0 percentage points compared to 2010.

- The share of passenger traffic accounted for by Australian designated airlines decreased from 33.2 per cent in 2010 to 30.1 per cent in 2015, increased to 32.8 per cent in 2019 before decreasing to 31.4 per cent in 2020. Qantas Airways, Jetstar and Virgin Australia contributed to the Australian airline share in 2020.

- Seats made available on international scheduled operations in 2020 totaled 14.902 million – a decrease of 72.2 per cent compared to 2019. The overall seat utilisation percentage (including China Airlines, Emirates, Qantas and Singapore Airlines passengers travelling through Australian ports) has decreased from 81.3 per cent in 2019 to 64.3 per cent in 2020.

- In 2020, Low Cost Carriers AirAsia X, Cebu Pacific Air, Citilink Indonesia, Indonesia AirAsia, Jetstar, Jetstar Asia, Scoot Tigerair and Thai AirAsia X together accounted for 14.6 per cent of total international passenger traffic. This is the same as the LCC share in 2019.

- International scheduled air freight traffic decreased by 18.9 per cent compared to 2019 to 894 715 tonnes in 2020. Inbound freight decreased by 14.2 per cent to 461 207 tonnes. Outbound freight decreased by 23.3 per cent to 433 508 tonnes.

- In 2020, scheduled dedicated freighter operations accounted for 68.7 per cent of scheduled inbound air freight to Australia, 55.2 per cent of scheduled outbound air

freight from Australia and 62.2 per cent of total scheduled air freight. Several airlines are only operating freight-only services to and from Australia during the period impacted by COVID-19 while suspending passenger air services. During the COVID-19 period, scheduled air services that did not carry passengers have been recorded as dedicated freighters.

- Table VI on page 9 shows Traffic On Board passenger movements, flights and operated seats at Australian international airports. All traffic is shown against the first Australian airport for arrivals to Australia and the last Australian airport for departures from Australia. Movements between Australian airports are not accounted for.

- Of the major airports, seat utilisation in 2020 was highest at Melbourne at 68.0 per cent, followed by Brisbane at 63.5 per cent, Sydney at 63.1 per cent, Adelaide at 62.6 per cent and Perth at 60.6 per cent.

- Table VII on page 10 shows Traffic On Board passenger movements, flights and operated seats between Australia and the top thirty countries with non-stop air service connections.

- New Zealand, Singapore, United Arab Emirates, USA and Indonesia were the top five countries in terms of traffic on board passenger movements in 2020. Seat utilisation was highest for UK (non-stop services) at 85.8 per cent, followed by South Africa at 81.2 per cent, Canada at 79.5 per cent, Mauritius at 79.4 per cent and Thailand at 77.2 per cent.

- Table VIII on page 10 shows Traffic On Board passenger movements, flights and operated seats between Australia and the top thirty international cities with non-stop air service connections.

- In 2020, 14.1 per cent of the passenger movements to/from Australia were either to/from or via Singapore. Auckland was the next largest hub accounting for 11.8 per cent followed by Denpasar (6.7 per cent), Dubai (6.1 per cent) and Kuala Lumpur (5.2 per cent).

- Page 11 is a diagrammatic representation of Traffic On Board passenger movements, flights and operated seats by region. The region is based on international cities with non-stop air service connections with Australia. In 2020, 33.0 per cent of the 14.902 million seats operated to/from Australia were either to/from or via South East Asia. North East Asia had 18.2 per cent followed by New Zealand at 17.8 per cent, Middle East at 14.9 per cent, North America at 8.9 per cent and the other regions accounted for 7.2 per cent.

- The information on Traffic On Board is derived from the uplift/discharge data used to produce the main Tables in this publication.

The information on Traffic On Board is derived from the uplift/discharge data used to produce the main Tables in this publication.

The total number of flights, passenger movements and seats shown correspond to total passenger services reported in Table 3.

Passenger numbers used here for China Airlines, Emirates, Qantas Airways and Singapore Airlines are total carried into and out of Australia.

* First country/port of call for departures from Australia or last country/port of call for arrivals to Australia.

**TRAFFIC ON BOARD PASSENGER MOVEMENTS, FLIGHTS AND SEATS BY REGION
BASED ON NON-STOP SERVICES TO AND FROM AUSTRALIA**

SCHEDULED INTERNATIONAL PASSENGER AIR SERVICES – Year ended December 2020

Please refer to explanatory notes - paragraphs 4, 5, and 7 in particular.
Several airlines have suspended all scheduled services or are only operating freight-only services to and from Australia during the period impacted by COVID-19.
Seat Factors shown in this table:
Traffic shown in this table for China Airlines, Emirates, Qantas Airways and Singapore Airlines will differ from traffic shown in Tables 1 and 2
because of the inclusion in this table of total traffic into and ex Australia (for seat factor purposes) whereas Tables 1 and 2 include
uplift/discharge traffic only. All other airlines report uplift/discharge traffic only. Currently, there are no other airlines operating via Australia,
and therefore uplift/discharge traffic is the same as total traffic into and ex Australia for all other airlines.
(a) Freight flights only.
(b) Service recommenced June 2020.
(c) Scheduled services commenced March 2020.

TABLE 6   INTERNATIONAL AIRLINES OWN STOPOVER REVENUE PASSENGERS, AUSTRALIAN CITY PAIRS: Year ended December 2020

City Pair Route	Total Passengers
Sydney/Canberra	229
Melbourne/Sydney	4
TOTAL	233

Notes:

1. Own Stopover Revenue Passengers : The aggregate of revenue passengers uplifted at one Australian airport and discharged (excluding transit passengers) at another Australian airport by the same foreign registered international airline on which they entered or left Australia.

2. City Pair Route represents the aggregation of passengers travelling in both directions.

3. This data is additional to the information presented in tables 1-5 which cover only those passengers travelling to/from overseas airports.

TABLE 7   TOTAL AIRCRAFT MOVEMENTS AT AUSTRALIAN INTERNATIONAL AIRPORTS BY AIRCRAFT TYPES: Year ended December 2020

Airport	Passenger Aircraft											Freighters				All Types
	32S	330	340	350	380	737	747	767	777	787	Other	33F/M1F/73F	74F	76F	77F

NOTE:
These figures only cover scheduled operations of the airlines listed in this publication. Charter/ferry operations are not included.
Aircraft Types (all series)

Airbus	330	340	350	380	32S (319, 320, 321)		33F		
Boeing	737	747	767	777	787	73F	75F	74F	76F	77F
McDonnell Douglas	M1F								

Other:
Bombardier	DH8	
Fokker	70	100

EXPLANATORY NOTES

INTRODUCTION

1. This publication continues the series of publications on a calendar year basis presenting statistical information on the scheduled operations of international airlines operating into/out of Australia.

2. The figures in this publication were obtained from reports submitted by scheduled international carriers and are the best available at the time of publication.

COVERAGE

3. These statistics show uplift/discharge data – These data detail, by direction, the revenue traffic between the actual points of uplift and discharge within each flight, aggregated for all flights within the period. It shows the movement of traffic between two airports not necessarily directly connected but within the same flight number. Typically, flight numbers change when an aircraft reaches its home country. This means that uplift/discharge data for the port in the operator's home country are likely to be overstated by traffic whose origin/destination point is beyond that port. For example, uplift/discharge traffic reported in this publication as Singapore could include traffic whose origin/destination is Europe.

4. These statistics cover revenue traffic carried by the operators of scheduled regular public international air transport services only and do not include charter traffic.

5. Flights with no revenue traffic uplifted from Australia or discharged in Australia are treated as positioning flights and are not included in this data collection. This mainly affects dedicated freighter flights where some flights outbound from Australia do not pick up freight in Australia.

PRODUCTION AND INTERPRETATION

6. Tables 1 and 2 show the country of the relevant uplift or discharge port served by that airline. For example, traffic uplifted/discharged between Sydney and Singapore by British Airways would be shown as Singapore traffic in Tables 1 and 2.

7. Table 3 shows figures for the country of service (or route) for each airline and therefore may not equate to the data in Tables 1 and 2. For example, the British Airways UK service identified in Table 3 could include passengers uplifted or discharged in Singapore as well as the UK; these passengers would be shown individually under those countries in Tables 1 and 2. The difference in treatment of data between Tables 1 and 2 and Table 3 is necessary in order to work out a meaningful Seat Utilisation figure for Table 3.

    Figures shown in Table 3 may include total traffic into and out of Australia for airlines that fly through Australia (also necessary in order to work out a meaningful Seat Utilisation figure). Therefore, figures in Table 3 may not equate to figures in Tables 1 and 2. For example, passengers carried by Qantas Airways from New Zealand via Australia to the UK will be included in Table 3 but will not be included in Tables 1 or 2 as these passengers were not uplifted/discharged in Australia.

8. Table 5 – shows uplift/discharge passenger and freight data for city pairs with "same flight number" international flight connections.

9.   Where figures have been rounded, discrepancies may occur between sums of component items and totals, and in percentage changes which are derived from figures prior to rounding.

10. Published figures may be revised where figures missing at the time of publication are received or misreporting/miscalculation necessitates revisions.

DEFINITIONS

11. The following definitions have been used in this publication:

(a)   Aircraft Movement: A landing or a take off.
(b)   Freight: The aggregate of all revenue freight uplifted or discharged in Australia.
(c)   Inbound: Inbound to Australia/Australian international airport.
(d)   Mail: The aggregate of all mail uplifted or discharged in Australia.
(e)   Outbound: Outbound from Australia/Australian international airport.
(f)   Revenue Passengers: please refer to paragraph 12.
(g)   Seat Utilisation: The ratio of passengers carried to seats available, expressed as a percentage.
(h)   Seats Available: Generally based on standard aircraft configuration, the aggregate of seats available on all flights operated over a particular service.
(i)   Services: Scheduled flights over authorised routes which are listed according to the main ports involved.

COMPARABILITY OF DATA OVER TIME

12. Revenue Passengers:

-   For July 2000 and onwards: All passengers paying any fare (frequent flyer redemption passengers are regarded as revenue passengers). In most cases, Revenue Passengers will now include all passengers excluding Free Of Charge passengers and positioning crew.
-   To December 1999: The aggregate of all passengers paying 25% or more of the standard air fare (as defined by ICAO at the time).
-   January 2000 to June 2000: Transition period.

The Revenue Passenger definition change could result in approximately a three per cent increase in passenger numbers over a full period (month or year).

13. Country and City data – reporting of Uplift/Discharge data by Qantas Airways:

-   Prior to January 2003: Uplift/Discharge within Qantas Airways' international network.
-   For January 2003 and onwards: Uplift/Discharge within flight number – as per the standard definition.

For example, what was reported as Adelaide to London in January 2002 (no direct services between these two cities), would be reported in January 2003 as either Adelaide to Singapore or Melbourne/Sydney to London.

This change was introduced in order to make the data comparable across all airlines operating services to/from Australia.

The effect of this change – comparing data under the two methods of reporting:
-   Country of Port data (Tables 1 & 2) – There will be a shift in traffic to countries such as Singapore and United Arab Emirates (from 2013) which are used as hubs and away from countries such as France, Germany and Italy which

previously received traffic channelled through hubs. The total volume of traffic is not affected.

- Country of Service data (Table 3) – no change, as the Uplift/Discharge definition is not applicable to classifying the country of service.
- Australian International Airports (Table 4) – there may be a shift of traffic to the major airports.
- City Pairs (Table 5) – There will be a shift in traffic to cities such as Singapore and Dubai (from 2013) which are used as hubs and away from cities such as Paris, Frankfurt and Rome which previously received traffic channelled through hubs. The total volume of traffic is not affected.
- Prior to the change, statistics reported for city pairs without "same flight number" international flight connections mainly reflected carriage on interconnecting international services by Qantas Airways. That traffic should have been interpreted as increasing the volume of traffic between the primary international ports rather than as an indicator of traffic volumes between ports without "same flight number" international flight connections. It should be noted however, that there was no double counting of traffic.

14. Country of Service classification by Qantas Airways:

   - For July 2002 and onwards: based on the foreign country where same flight number services commence or cease – as per the standard definition. For example, Sydney-Denpasar-Singapore services would be classified as Country of Service = Singapore.
   - Prior to July 2002: based on Qantas classification – this mainly affected Indonesia and Singapore Countries of Service. For example, Sydney-Denpasar-Singapore services were classified as Country of Service = Indonesia.

15. Airline data – Reporting of code share services:

   Reporting of traffic split by airline code for code share arrangements was discontinued as of June 2000. For July 2000 and onwards, ALL traffic carried is reported under the operating airline regardless of code share arrangements.
   Monthly airline market share figures for July 2001 onwards will be comparable with the same month in the previous year. However, these figures may not be comparable with monthly data prior to July 2000.

SYMBOLS AND OTHER USAGE

-     nil or zero
..   not applicable

DATA ISSUES

During the period impacted by the COVID-19 pandemic, airlines that normally would only operate scheduled air services could also operate charter air services and where charter air services are not clearly identified, they may be included in the data in this publication.

Seat utilisation:

Available seats have not been counted where passenger aircraft have been used to operate freight-only services. However, this adjustment cannot be made for airlines that report monthly aggregates and that have operated a mix of passenger and freight-only services using passenger aircraft.

Some airlines have reported adjusted seats to take account of social distancing while others have reported fitted seats.

AIRLINES COMMENCING/WITHDRAWING SERVICES DURING 2020

Kalitta Air – Scheduled services commenced March 2020.

Hong Kong Airlines – Service recommenced June 2020.

Several airlines have suspended all scheduled services or are only operating freight-only services to and from Australia during the period impacted by COVID-19.
