

The Future Isn't What It Used To Be

How technology and society will change the face of Urban Transport

> Todd Litman Victoria Transport Policy Institute Presented Canberra, Australia 7 April 2009

Creating Paradise

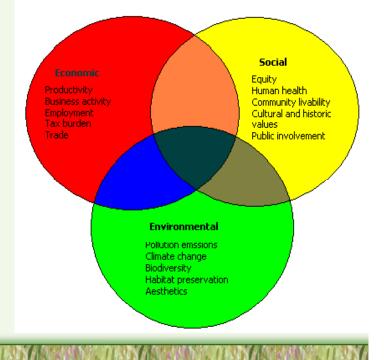

Paradise is not a distant destination, it is something we create in our own communities.

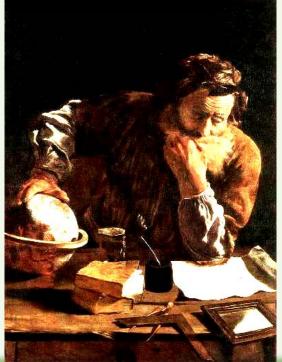

Sustainable Planning

Sustainability emphasizes the integrated nature of human activities and therefore the need to coordinate planning among different sectors, jurisdictions and groups.

4/23/2009

Preventing Problems

Sustainability planning is to development what preventive medicine is to health: it anticipates and manages problems rather than waiting for crises to develop.

• **Growth** - expanding, doing more.

 Development improving, doing better.

Mobility - physical movement.

Û

Accessibility obtaining desired goods, services and activities.

and the second second

Resource Sustainability

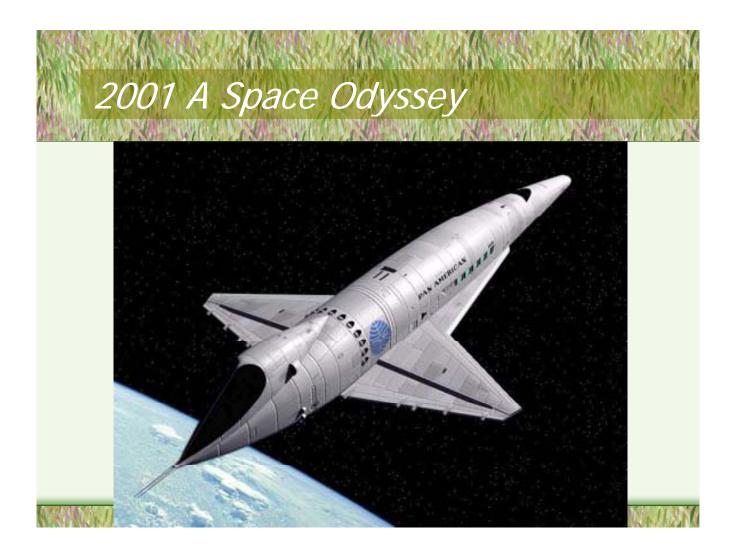

Would we have a sustainable transportation system if all automobiles were solar powered?

Trends Supporting Multi-Modalism

- Motor vehicle saturation.
- Aging population.
- Rising fuel prices.
- Increased urbanization.
- Increased traffic and parking congestion.
- Rising roadway construction costs and declining economic return from increased roadway capacity.
- Environmental concerns.
- Health Concerns

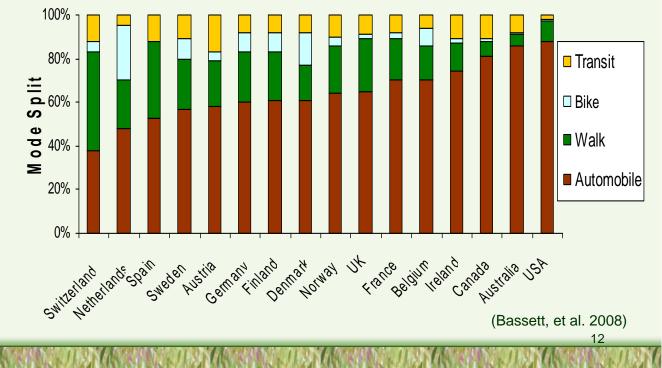

A SELECTION AND SELECTION AND SELECTION AND AND A CONSTRUCTION AND A SELECTION AND A SELECTION AND A SELECTION A

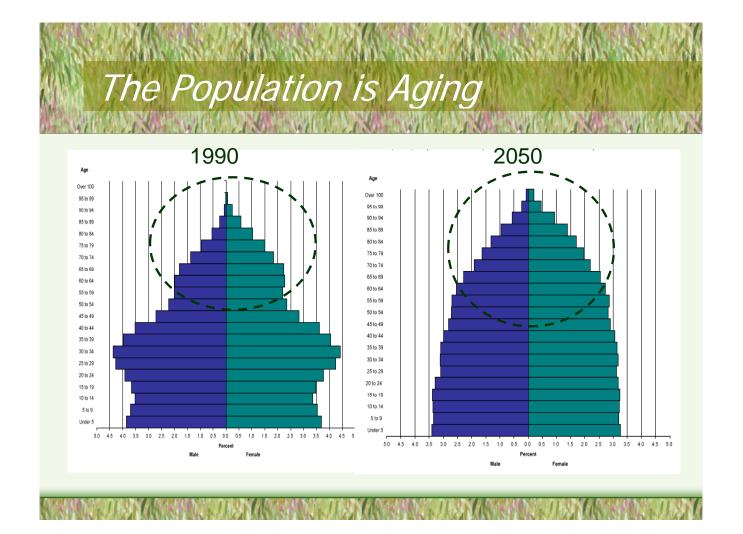

OECD Travel Trends

A SENTINY A

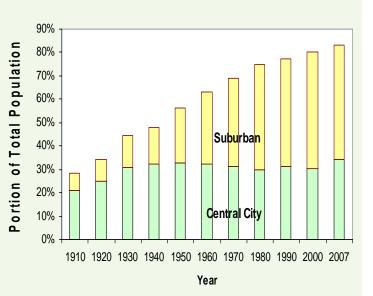

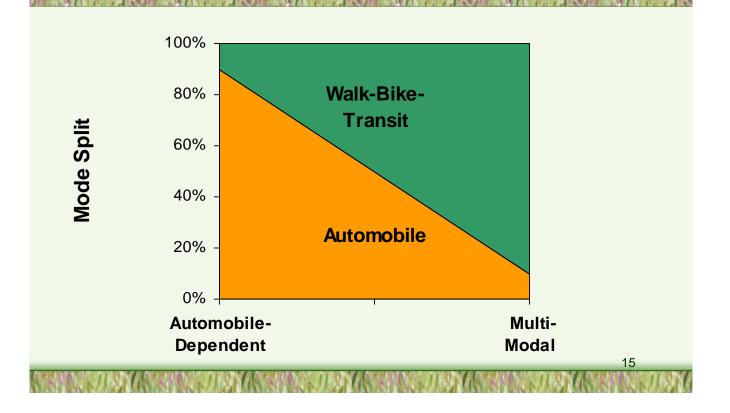

Between the 1940s and 1980s the population became more suburbanized. In recent years, cities started gaining population and suburban jurisdictions started to urbanize.

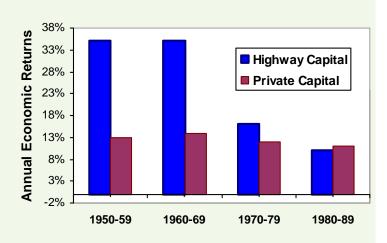

Optimal Modal Split

Value of Highway Expansion

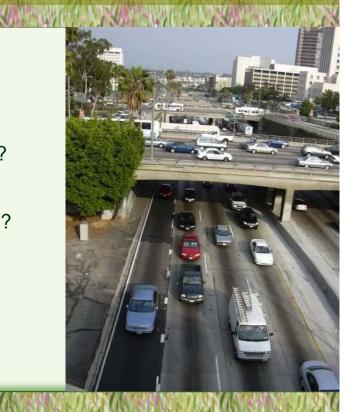

When the highway system was being developed in the 1950s and 60s it provided high returns on investment. Now that the system is mature, economic returns have declined.

GARNE DERYRGAN DERYRGAN DERYRGAN DERYRGAN DERYRGAN DERYRGAN DER

What is "The" Transportation Problem?

- Traffic congestion?
- Road construction costs?
- Parking congestion or costs?
- Excessive costs to consumers?
- Traffic crashes?
- Lack of mobility for non-drivers?
- Poor freight services?
- Environmental impacts?
- Inadequate physical activity?
- Others?

Current Transport Planning

Current planning tends to be reductionist: each problem is assigned to a single agency with narrowly defined responsibilities. For example:

- Transport agencies deal with congestion.
- Environmental agencies deal with pollution.
- Welfare agencies deal with the needs of disadvantaged people.
- Public health agencies are concerned with community fitness.
- Etc.

Reductionist Decision-Making

Reductionist planning can result in public agencies implementing solutions to one problem that exacerbate other problems facing society, and tends to undervalue strategies that provide multiple but modest benefits.

Win-Win Solutions

Put another way, more comprehensive planning helps identify "Win-Win" strategies: solutions to one problem that also help solve other problems facing society.

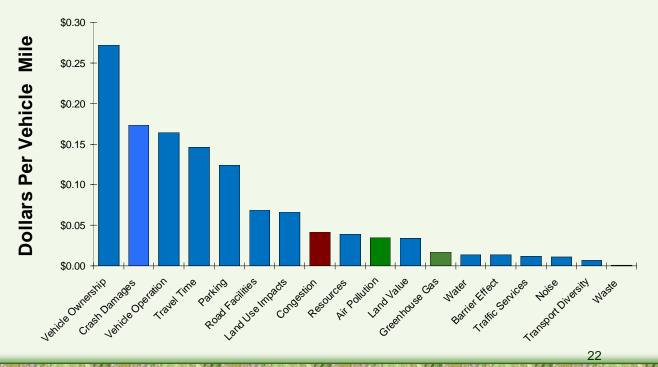

Ask:

"Which congestion-reduction strategy also reduces parking costs, saves consumers money, and improves mobility options for non-drivers."

Conventional Evaluation

Generally Considered

- Congestion impacts.
- Vehicle operating costs.
- Per-mile crash impacts.
- Per-mile pollution emissions.

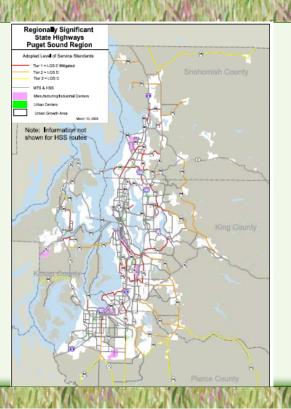

Often Overlooked

- Downstream congestion.
- Parking costs.
- Vehicle ownership costs.
- Crash, energy & pollution impacts of changes in mileage.
- Land use impacts.
- Impacts on mobility options for non-drivers/equity impacts.
- Changes in active transport and related health impacts.

ANNA DE MANNE DE M

Conventional Transport Indicators

- Roadway Level-of-Service (LOS)
- Average traffic speeds.
- Per capita congestion delay.
- Parking occupancy rates.
- Traffic fatalities per billion vehicle-miles.

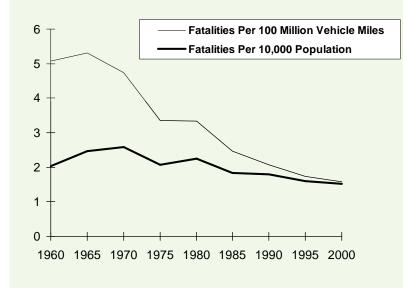

Multi-Modal Level-Of-Service (LOS)

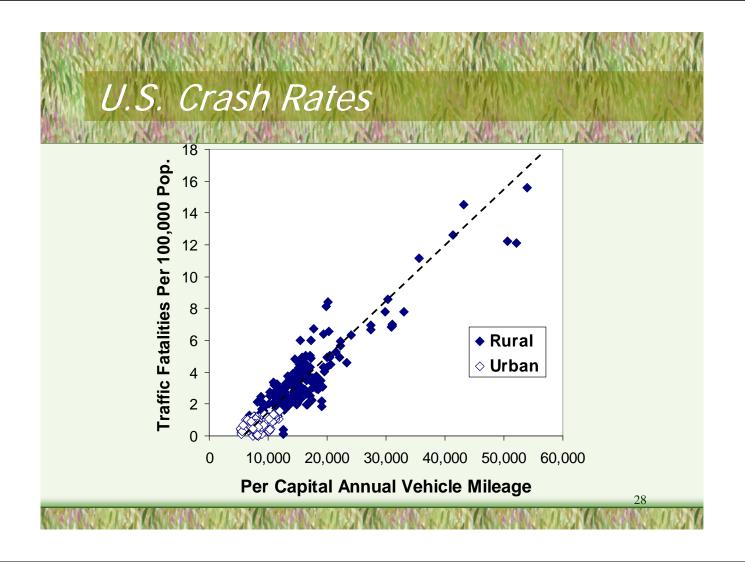

Mode	Level of Service Factors
Walking	Sidewalk/path quality, street crossing conditions, land use conditions, security, prestige.
Cycling	Path quality, street riding conditions, parking conditions, security.
Ridesharing	Ridematching services, chances of finding matches, HOV priority.
Public transit	Service coverage, frequency, speed (relative to driving), vehicle and waiting area comfort, user information, price, security, prestige.
Automobile	Speed, congestion delay, roadway conditions, parking convenience, safety.
Telework	Employer acceptance/support of telecommuting, Internet access.
Delivery services	Coverage, speed, convenience, affordability.
ALSO DE DEPARTS	A CONTRACTOR OF THE STATE OF THE

Emission reductions they do not currently use it) Public fitness & health

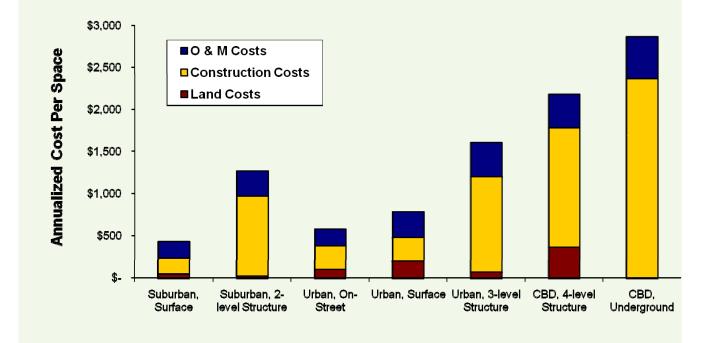

Traffic Fatality Rates

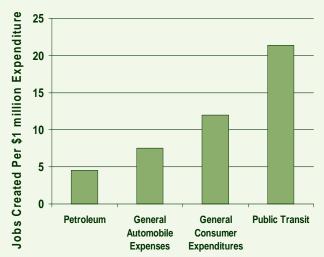

When crash rates are measured per vehicle mile, they declined significantly, but when measured per capita they show relatively little decline due to increased per capita vehicle mileage.

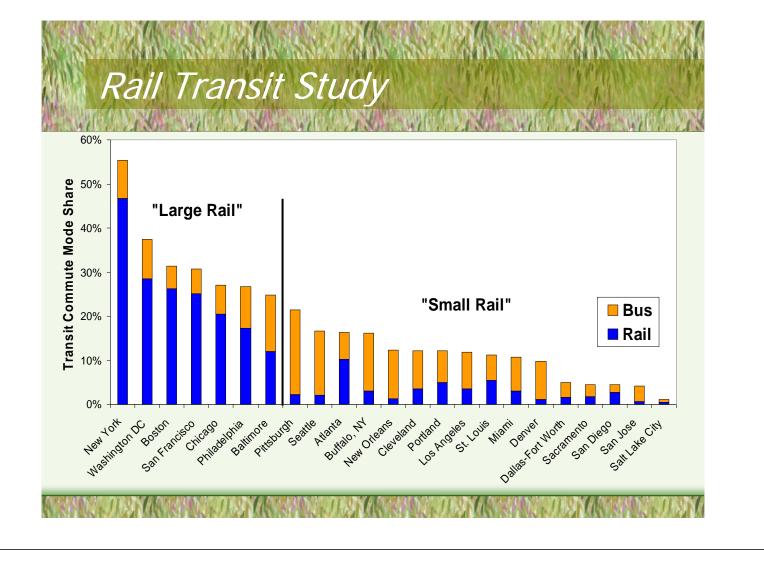

Parking Facility Costs

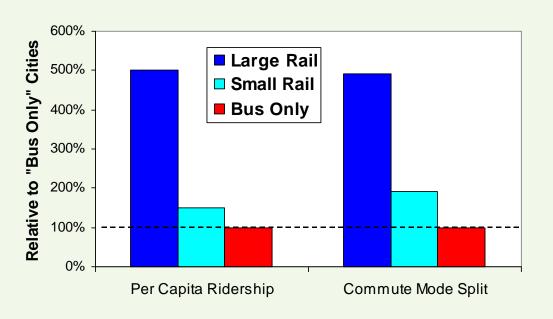

Economic Development Benefits

- Reducing vehicle expenditures and expanding transit service increases regional employment and business activity.
- Reducing business transport costs (congestion, parking, taxes) increases productivity and competitiveness.
- Agglomeration efficiencies.
- Stimulates development and increases local property values.
- Increases affordability, allowing businesses to attract employees in areas with high living costs.
- Shifting household expenditures from vehicles to housing increases household wealth.

Automobile Travel

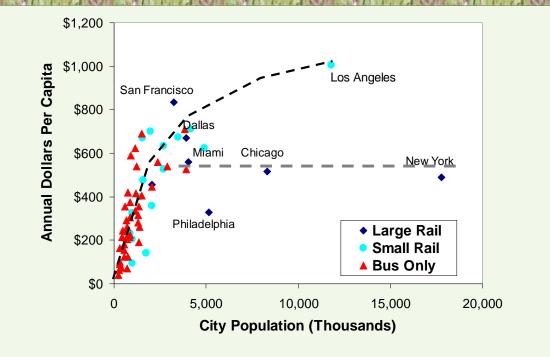

Congestion Reduction

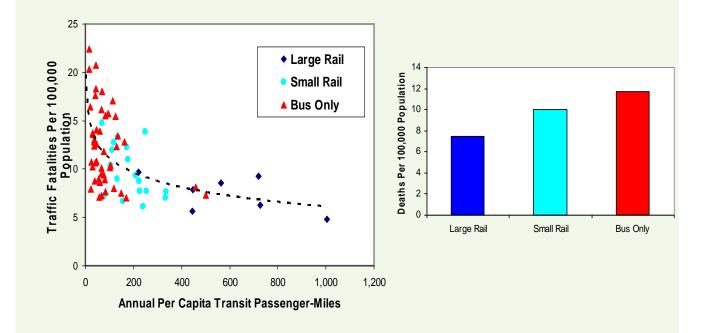

- Urban road congestion maintains equilibrium. It gets bad enough to discourage further vehicle trips.
- The quality of travel options affects this point of equilibrium: If alternatives are inferior, few motorists will shift mode and congestion will be severe. If alternatives are attractive, motorists are more likely to shift modes, reducing congestion equilibrium.
- The faster the transit service, the faster the traffic speeds on parallel highways. Several studies find that door-to-door travel times for motorists tend to converge with those of grade-separated transit.

and the second secon

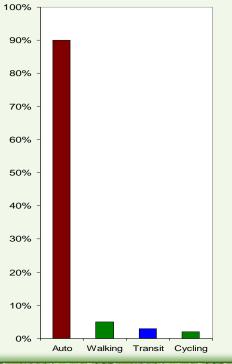

Summary - Quality Transit

Cities with high quality transit have:

- Four times the per capita transit ridership.
- A fifth lower per capita vehicle mileage.
- 30-50% lower per capita congestion costs.
- A third lower per-capita traffic fatality rates.
- 20% smaller portion of household budgets devoted to transport, savings about \$500 annually per capita.
- A third lower transit operating costs.
- 58% higher transit service cost recovery.
- More money circulating in the local economy.
- More per capita walking.
- More efficient land use and higher property values.
- Improved environmental performance.

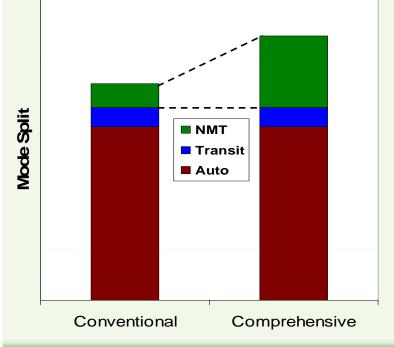

What Mode is Most Important?

Conventional transport evaluation indicates that automobile travel is far more important than active transportation, providing **15 times** as many person-trips and **50 times** as many person-miles.

From this perspective, walking and cycling are minor modes of travel, and so deserves only modest public support.

Counting All Walking

If, instead of asking, "What portion of trips are **only** by active transport? We ask, "What portion of trips involve **some** active transport?" the portion of active transport typically increases 2-6 times.

Travel Distances Versus Time

60% Walking Distance 50% Time represents a Trips small portion 40% of travel 30% distance but a large portion of 20% travel time, particularly in 10% urban areas 0% Walk **Automobile Driver**

Nonmotorized Evaluation

To their credit, many planners support greater investment in nonmotorized planning than their evaluation tools justify. They intuitively know that walking and cycling are important in ways that are difficult to measure.

Better active transportation evaluation methods are need to justify even more nonmotorized improvements.

Smart Growth Versus Sprawl

A SECTION AS SECTION AS SECTION AS SECTION AS SECTION AS SECTION AS SECTION

Smart Growth (Density, Design, Diversity)

- More compact, infill development.
- Mixed land use.
- Increased connectivity.
- Improved walkability.
- Urban villages.
- Increased transportation diversity.
- Better parking management.
- Improved public realm.
- More traffic calming and speed control.

Smart Growth Benefits

Economic

- Increased resource
 efficiency.
- Lower development costs.
- Lower public service costs.
- Road and parking cost savings.
- Economies of agglomeration.
- More efficient transportation.

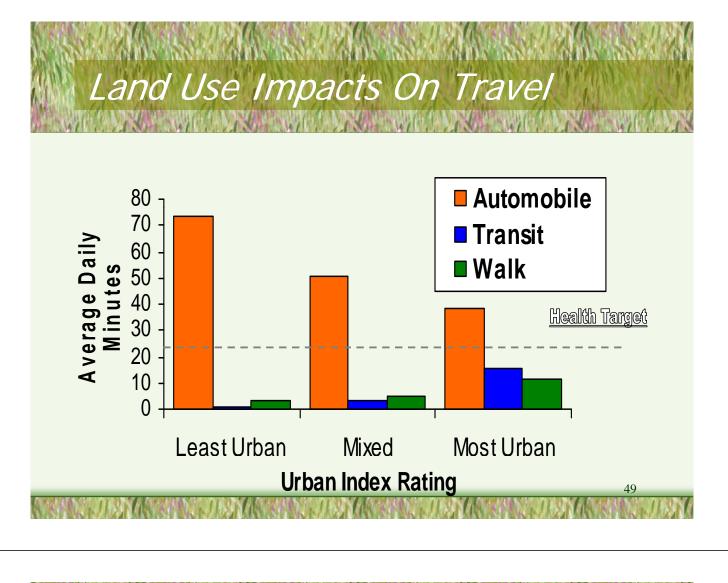

<u>Social</u>

- Improved transport options, particularly for nondrivers.
- Improved housing options.
- Community cohesion.
- Preserves unique cultural resources.
- More opportunities to exercise.

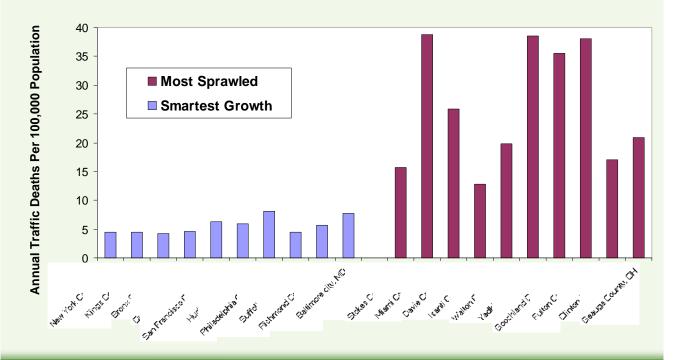

<u>Environmental</u>

- Greenspace & habitat preservation.
- Reduced air pollution.
- Increased energy efficiency.
- Reduced water pollution.
- Reduced "heat island" effect.

Infrastructure Costs

- Increased infrastructure and public service costs.
- Increased distribution costs to businesses.
- Increased transport costs to residents.
- School busing costs.
- Environmental costs.

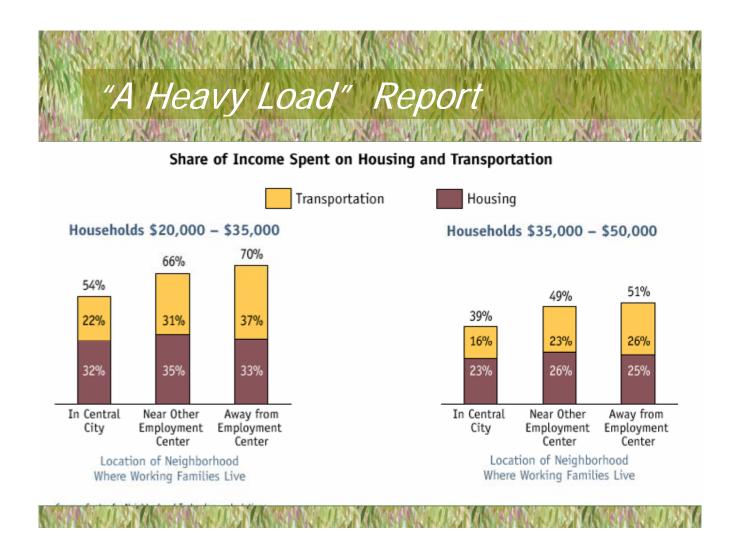

A SA NE DINA ANG NE DINA ANG SA NEDINA ANG SA NEDINA ANG SA NEDINA ANG SA NEDINA.

Location-Efficient Development

- Locate affordable housing in accessible areas (near services and jobs, walkable, public transit).
- Diverse, affordable housing options (secondary suites, rooms over shops, loft apartments).
- Reduced parking requirements.
- Reduces property taxes and utility fees for clustered and infill housing.

ARE DE TIDEN A REAL DE TIDEN A

Reduces Affordability

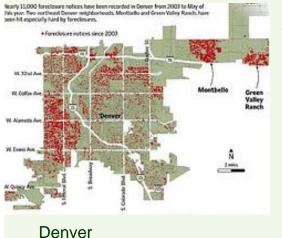

- Urban growth boundaries (reduces developable land supply).
- Increased design requirements (curbs, sidewalks, sound barriers, etc.).

Increases Affordability

- Higher density reduces land requirements per unit.
- Reduced parking and setback requirements.
- More diverse, affordable housing options (secondary suites, rooms over shops, loft apartments).
- Reduces property taxes and utility fees for clustered and infill housing.
- Improved accessibility reduces transport costs.

Housing foreclosure rates are much higher in automobiledependent locations.

A REAL PROPERTY A CONSTRUCTION OF THE ACCOUNT A CONSTRUCTION AND A

Community Livability & Cohesion

Community Livability refers to the environmental and social quality of an area as perceived by residents, employees, customers and visitors.

Community Cohesion refers to the quantity and quality of positive interactions among people in a community.

Streets that are attractive, safe and suitable for walking and cycling increase community livability and cohesion.

Win-Win Transportation Solutions

Market reforms justified on economic principles that help provide various economic, social and environmental benefits.

- Improved travel options.
- Incentives to use travel alternatives.
- Accessible land use.
- Policy and market reforms.

Mode Shifts

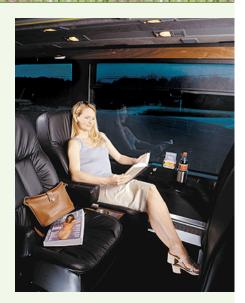

How do we convince people who drive luxury cars to shift mode?

Attracting Discretionary Riders

- Quality service (convenient, fast, comfortable).
- Low fares.

4/23/2009

- Support (walkable communities, park & ride facilities, commute trip reduction programs).
- Convenient information.
- Parking pricing or "cash out".
- Integrated with special events.
- Positive Image.

an shi na dhalaa shi dhalaa shi dhalaa ka na dhalaa shi na dhalaa shi na dhalaa shi dhalaa shi dhalaa

Transit Station Level-Of-Service

- Clean
- Comfort (seating, temperature, quiet)
- Convenience (real-time user information, easy fare payment)
- Accessible (walkability, bike parking, nearby housing, employment, nearby shops)
- Services (refreshments, periodicals, etc.)
- Security

Walking and Cycling Improvements

- More investment in sidewalks, crosswalks, paths and bike lanes.
- Improved roadway shoulders.
- More traffic calming.
- Bicycle parking and changing facilities.
- Encouragement, education and enforcement programs.

School & Campus Transport Management

Programs that encourage parents and students to use alternative modes to travel to schools, colleges and universities.

ana na dhayan an na dhayan an dhayan an na dhaya

Employee Trip Reduction Programs

Employers encourage employees to walk, bicycle, carpool, ride transit and telework rather than drive to work.

"Raise My Prices, Please!"

Of course, motorists do not like to pay more for roads and parking, but unpriced facilities are not really free, consumers ultimately pay through higher taxes and retail prices. The choice is actually between paying directly or indirectly.

Savings To Motorists

Paying directly is more equitable and efficient. It gives individual consumers the savings that result when they drive less, providing a new opportunity to save money.

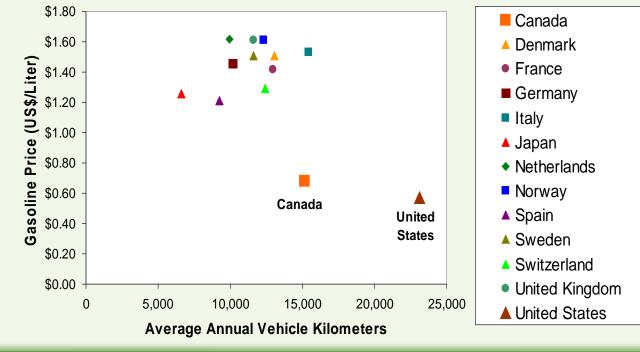

A SECTION AND A REAL OF A REAL OF A REAL OF A REAL OF A REAL AND A

Distance-Based Pricing

Motorists pay by the vehiclekilometre, so a \$600 annual premium becomes 3¢/km and a \$2,000 annual premium becomes 10¢/km. This gives motorists a significant financial incentive to drive less, but is not a new fee at all, simply a different way to pay existing fees.

Fuel Taxes

E STATE TID Y A SE STATE Y A SE S

Parking Management

- More flexible parking requirements.
- Share parking spaces rather than having assigned spaces.
- Charge users directly for parking, rather than indirectly through taxes and rents.
- Parking Cash Out (Employees who current receive free parking are able to choose a cash benefit or transit subsidy instead.)

Parking Pricing and Cash Out

Parking is never really free, consumers either pay directly or indirectly. Paying directly tends to be more fair and efficient, and typically reduces parking demand about 20%.

Motorists Benefit Too

More balanced transport policy is no more "anti-car" than a healthy diet is anti-food. Motorists have every reason to support these reforms:

- Reduced traffic and parking congestion.
- Improved safety.
- Reduced chauffeuring burden.
- Option value.
- Often the quickest and most cost effective way to improve driving conditions.
